Research Focus

My research focuses on context-sensitive expressions: words whose meanings change depending on who is speaking to whom, and where. More broadly, I am interested in how conversation participants use their knowledge about each other's mental states. Do speakers accommodate their listeners' visual perspectives on the scene? Do listeners use their knowledge of a speaker's opinions to better interpret their sentences?

These aspects of language are some of the most challenging for artificial intelligence to grasp, because they are situational, grounded, and interactive. Exploring these questions can help us understand general cognitive behavior such as theory of mind (our beliefs about other people's mental states), and help artificial intelligence learn to use language in a dynamic, responsive way.
